Operating Instructions

Shaking device
SV 14 / 22
SV 29 / 45
Brief technical description
The shaking device permits controlled shaking of beakers or test tubes in a waterbath. The shaking device performs a reversing linear movement with a frequency of approx. 35 to 160 strokes per minute. The shaking speed is controlled electronically and can be adjusted in 10 speed steps. The stroke is approx. 15 mm. The ambient conditions for its operation are the same as for the basic units.

Inserting and removing
The bath can be operated without shaking device if required. After the shaking device and the support basket has been removed, the side panel supplied should be secured to the gable cover by means of the two screws in order to ensure optimum sealing of the cover. Fitting the shaking device has to take place in the reverse order.

Safety note
If the shaking device has to remain in a waterbath that is switched on, it has to remain switched on as well! The shaking speed can be set to a standstill! When being switched off, the overpressure steam blockage is out of action and condensate may pass into the housing of the shaking device!
Starting up

Mains supply
The mains cable must be arranged so that it can not come anywhere into contact with hot surfaces of the unit.

Filling the waterbath

In order to protect the stainless steel shaking device it is necessary to use deionised water as the thermofluid. The bath must be filled so that the liquid level is between the two level marks on the right inside the tank (with the shaking device carrying its load)!

Note!
Depending on the loading of the shaking device and the shaking speed selected, it is possible for the bath liquid or the (possibly noxious) shaken liquid to slop over. In that case the shaking speed or the liquid level have to be suitably adjusted but without going below the minimum liquid level.

Switching on and setting the shaking speed
The unit is switched on by pressing the push/turn control. The symbol indicates that the unit is ready for operation.

Quick stop on overload
The unit incorporates a quick stop on overload as a safety device.
Operation of this safety device can be recognised by the symbol lighting up.
In this case it is necessary to check whether there is any overloading or whether some object has been trapped in the system.
After the overload has been removed, the shaking device can be restarted by briefly pressing the SET key and setting the shaking speed again.
EC Declaration of Conformity

Manufacturer’s name and address: MEMMERT GmbH + Co. KG
Äußere Rittersbacher Straße 38
D-91126 Schwabach

Product: Shaking device
Type: M00 / M01
Sizes: SV 14-22 / SV 29-45
Nominal voltage: AC 230 V 50/60 Hz
alternative AC 115 V 50/60 Hz

The designated product is in conformity with the European EMC-Directive

2004/108/EEC
including amendments

Full compliance with the standards listed below proves the conformity of the designated product with the essential protection requirements of the above-mentioned EC Directive:

DIN EN 61326:2004-05
EN 61326:1997
EN 61326/A1:1998
EN 61326/A2:2001
EN 61326/A2:2003

The designated product is in conformity with the European Low Voltage Directive

2006/95/EEC
including amendments

Full compliance with the standards listed below proves the conformity of the designated product with the essential protection requirements of the above-mentioned EC Directive:

DIN EN 61 010-1 (VDE 0411 part 1):2002-08
EN 61 010-1:2001
DIN EN 61 010-2-010 (VDE 0411 part 2-010):2004-06
EN 61 010-2-010:2003

Schwabach, 03.07.08

(Legally binding signature of the issuer)

This declaration certifies compliance with the above mentioned directives but does not include a property assurance. The safety note given in the product documentation which are part of the supply, must be observed.
